

Rob5x Laboratory Test Automation Platform

5 Axes for Optimum Flexibility & Control

All of the Advantages

- Precise trajectory & position control
- Vacuum pick-up for batch handling of cards & tags
- Engineered for minimal influence on contactless communications
- Easy-to-use COM ActiveX interface
- Safe, secure, lab-ready installation provides years of rigorous testing and trouble-free service.

Rob5x is a complete installation adapted specifically to the constraints and needs of in-house design labs.

Optimized encumbrance, noise characteristics and a security housing make it an ideal test automation platform for safe and easy physical automation of contactless testing.

KEGLABS
your challenges. our solutions
Authorized Reseller

A Complete, Lab-Ready Installation

To meet the challenges of testing contactless smart cards, readers and NFC systems, KEOLABS provides the Rob5x robot installation which, in combination with KEOLABS' test platforms, facilitates device validation and pre-certification testing by providing:

- Improved repeatability where physical manipulation of the device under test is required
- Unmatched positioning and movement control to keep pace with the latest test standards
- Improved lab throughput, notably when batch testing contactless cards and tags

Rob5x Laboratory Test Automation Platform

Rob5x adapts easily to test smart objects in various formats and can be delivered with adaptations for cards and tags or more cumbersome devices such as NFC mobile phones. Card testing installations may include automation features such as a vacuum pick up and predefined placements for tested devices to support batch testing.

The 5-Axis Advantages

Rob5x with 5 axes of movement control provides increased flexibility in controlling the position of the device under test. Position controls include the device's planar orientation (tilt, yaw) and rotation.

The Rob5x COM ActiveX programming interface allows the user to easily define multiple trajectories and orientations of the device under test in a way that is both precise and repeatable time and again.

Test Tool and Solution Integration

Rob5x complements KEOLABS' ProxiLAB and ProxiSPY realtime laboratory emulation and measurement tools, making it possible to conduct testing such as interoperability verification, RF field strength mapping and dynamic field entry testing in a manner that is precise, systematic and repeatable.

Rob5x also integrates SCRIPTIS standard-specific solutions for testing device conformance including solutions for ISO 10373-6 and ICAO conformance testing.
